

DÄMMGULAST® Channel sections

for MPR-Profiles

Application

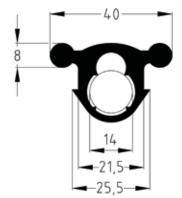

- Ideal for the decoupling of traverses for air duct fixtures
- For secure vibration-decoupling of MPR-Support channels

Your advantages

- Easy installation by inserting into MPR-Support channels and/or screwing onto threaded rods
- Prevents structure-borne noise coupling by avoiding contact between the air duct and the threaded rods
- Interlocking profile prevents channel section being pushed out
- Prevents fluttering and other vibration noises in the air ducts
- Small contact surface, large absorption mass

Features For profiles Suitable for Part no. Sales unit Pack unit Design DÄMMGULAST® Channel sections 41/21-41/124 Channels with slot widths of 22 mm, M8 151189 1 Roll roll of 20 m and M10 threaded rods DÄMMGULAST® Channel sections 200 155366 **Pieces** section of 50 mm

When installing air conditioning and ventilation equipment, MPR-Support channels can be used as load-bearing traverses. Structure-borne vibration coupling bridges resulting from direct metal contact between the air duct and the traverse or threaded rods can be prevented by the use of DÄMMGULAST® Channel section as intermediate layer.

The DÄMMGULAST® Channel section was developed especially for these application areas and provides the optimum solution from a practical installation point of view.
