

Trapezoid-sheet hanger galvanised

Application

- For the professional attachment of installations to trapezoidal sheets

Your advantages

- Attachment using sealing rivets or self-drilling screws to the stays of the corrugations
- Round holes at the ends of the legs also enable a pass-through-mounting of M8 or M10 threaded rods
- Approved by VdS for pipe attachments up to DN 50 with threaded rods and counted nuts (observe assembly instructions included with the product)
- M10 with FM approval for holding pipes up to DN 50

Features

Design	Max. recommended load [N]
with welded-on nut	2,000

Design	Type	VdS	FM	Part no.	Sales unit	Pack unit
with welded-on nut	M8	x		177509	100	Pieces
	M10	x	x	179821		

! The specifications of the International Assotiation for Light metal Construction IFBS must be observed for the attachment of trapezoidal sheet hangers on trapezoidal sheet metal by means of drilling screws made of cast hardened steel or blind rivets. Zinc plated drilling screws with ETA assessment can be found in the section „Ventilation“.

In case of attachment by means of threaded rods and through-hole mounting the max. hole bearing has to be calculated.

! Refer to chapter „Tools“ for trapezoid-sheet pliers used for attachment.
