

Drill hole cleaning kit

Application

- Combination kit for cleaning of drilled holes

Your advantages

- Suitable for dry and clamp holes
- Kit is a precondition for achieving the maximum anchor load-bearing capability of both frictional and chemical plug bonds

Part no.	Sales unit	Pack unit
179675	1	Set

With all frictional and chemical plug and anchor connections, the load-bearing capability of the plug is influenced decisively by the cleanliness of the drilled hole. Residues such as drill dust reduce the effectiveness of the fixture. For this reason, blow or brush out the hole to free it from dust before inserting the plug (see drill hole cleaning kit).

Cartridge guns

for Injection anchors XV Plus
