

### Drill hole cleaning kit

#### Field of application

- Combination kit for cleaning of drilled holes

#### Advantages

- Suitable for dry and clamp holes
- Kit is a precondition for achieving the maximum anchor load-bearing capability of both frictional and chemical plug bonds

Part no.	Sales unit	Pack unit
106654	1	set

**!** The load-bearing capability of the plug at all frictional and chemical plug bonds and anchor connections is influenced decisively by the cleanliness of the drilled hole. Residues such as drill dust reduce the effectiveness of the fixture. For this reason, blow or brush out the hole to free it from dust before inserting the plug.

### Further accessories

Cartridge gun

Cartridge gun Profi

Steel wire brush

**!** The load-bearing capability of the plug at all frictional and chemical plug and anchor connections is influenced decisively by the cleanliness of the drilled hole. Residues such as drill dust reduce the effectiveness of the fixture. For this reason, blow or brush out the hole with a brush to free it from dust before inserting the sieve sleeve or the anchor rods.
