

MPC-VARIO joint

zinc-nickel

Field of application

- Flexible implementation for connecting MPC-Support channels, for which different angle adjustments are required for versatile implementation possibilities, such as frame subconstructions for solar modules, angular support brackets, etc.

Advantages

- Pivot angle from 10° to 180° for fast and flexible adaptation to a wide variety of attachment situations
- Cost savings can be realised in the area of stockkeeping, as a variety of support solutions
- Stable design of the joint for optimal transmission of force
- Quick and easy mounting at the construction site via double rail nuts
- Zinc-nickel coating ensures trouble-free outdoor use

Features

Design				Max. recommended load [N]
				1,000
				2,000
