

### StaboFix® Fixing system galvanised

#### Field of application

- Fixing system for mounting in cramped shafts, ducts and washbasin installation

#### Advantages

- High flexibility due to versatile range of applications in front of and within a wall, in wall recesses, wall break-throughs as well as in supply shafts
- Simple folding on site can bring the StaboFix® Sections into the desired form
- The StaboFix® Retaining plate can be simply and quickly clipped onto the sections and enables the attachment of non-twisting and centred wall carrier plates
- Smooth attachment of all common sanitary systems, while obtaining standard sanitary measures by means of a special hole template in the section
- Simple height adjustment of syphon bends or cross-running pipes using StaboFix® Clamps and threaded pins
- Pipe clamps with connection threads M8 and M8/M10 can be simply and quickly attached with StaboFix® Bolts
- All system components are perfectly matched to each other reducing the assembly effort
- High quality and firmness of the components
- Effective installation due to the basic assortment of installation components

StaboFix® Retaining plate

StaboFix® Section

For simple, quick and secure fixing of pipe clamps with connection threads M8 and M8/M10

For the fixing of syphon bends and cross-running pipes – simple height adjustment
